

1) Insert legs into ring until the clip clicks.

2) Close ring around the trunk at your desired height. It is recommended to be as close to, or just inside, the first branches of the tree if possible.

3) TWIST POLES to unlock, extend, and twist to lock.

4) The foot allows a small degree of rotation in case it is not aligned after locking the poles.

5) Stake with a hammer while angling stakes towards the tree.

6) For extra bark protection use tree wrap on the tree where the ring may contact the tree. This is recommended for climates that are windy or have freezing temperatures in the winter.
